

Alessio Carrà

Senior Product Manager, Platform & Growth

bralca88@gmail.com · Based in Germany · Italian native · English highly proficient

Senior Product Manager with 12+ years across platform products, growth, data APIs, and AI-enabled software. I have taken products from 0 to \$10M ARR in 9 months, doubled revenue at two companies, and led cross-functional teams across product, engineering, design, and marketing. After Moralis, I spent a focused AI learning period building hands-on with agent workflows, model routing, context management, and evaluation systems.

KEY OUTCOMES

\$10M ARR product built from 0 to 1 in 9 months	2x revenue doubled at two companies	30+ cross-functional people led	\$1B+ assets under management growth supported
---	---	---	--

EXPERIENCE

Senior Product Manager, Platform & Growth

2022 - 2025

Moralis

- Scope expanded across platform, customer product, growth, and team leadership: from owning developer-facing data APIs and infrastructure, to building a product on top of them, to scaling revenue and operating multiple cross-functional teams.
- Owned developer-facing data APIs and platform services used to build wallets, apps, and analytics products across onchain ecosystems.
 - Led product requirements and trade-offs for event ingestion, data-processing pipelines, Wallet, Token, Transfer, and pricing APIs, including a cross-chain candlestick pricing service compatible with TradingView.
 - Delivered full Solana chain support from ingestion through customer-facing surfaces, turning fragmented, high-volume source data into reliable APIs and product experiences.
 - Built and owned a customer-facing product on top of the platform, from onboarding and first-run activation through conversion, retention, pricing, and feedback loops.
 - Took the product from 0 to \$10M ARR in 9 months, then grew the operating model from a small squad of one designer and two engineers into several product teams plus dedicated marketing.

Growth Product Manager

2021

Celsius Network

- Helped grow a crypto yield product to \$1B+ in assets under management through acquisition, activation, retention, and lifecycle work.
- Built an acquisition engine that became a leading referral channel and connected product experiments to measurable user growth.

Growth Lead

2019 - 2021

Pipe

- Set growth strategy and the tracking model for a B2B SaaS business, then doubled ARR within a year.
- Improved conversion, lifecycle, acquisition, and funnel instrumentation across the full product-led growth motion.

Founding Member, Growth Product

2017 - 2019

Studyportals

- Began as one half of a two-person team building a new product through rapid iteration, then helped scale the team to 12.
- Owned the experiment pipeline and allocated people and resources across discovery, delivery, and growth work.

Product Manager

2015 - 2016

Alidays

- Hired after the company awarded my master's thesis, then shipped a website and mobile app that added EUR10M in revenue over two years.

SKILLS

Product Leadership	Product vision Roadmaps Customer discovery Requirements Stakeholder storytelling GTM alignment
Platform, Data & APIs	API lifecycle Developer experience Data products Pricing and market data Data quality Analytics products
Growth	Product-led growth Activation Retention Conversion Lifecycle Experimentation Monetisation
AI Systems	Agent workflows LLM orchestration Model routing Evals Observability Context management MCP
Leadership & Execution	Cross-functional leadership Remote-first teams R&D partnership Commercial alignment Product operations

EDUCATION & DEVELOPMENT

B.Sc. Industrial Engineering & M.Sc. Information Engineering Politecnico di Milano	2007 - 2013
Systems, operations, and technical product foundations. Master's thesis later became a shipped product and first PM role.	
Product-led growth, experimentation & analytics Growth Tribe Academy	2017
Formal grounding in funnel analytics, opportunity sizing, and experiment-led product development.	
Agentic coding and AI product systems Self-directed	2024 - 2025
Hands-on work with coding agents, model routing, evaluation loops, context management, and modern AI development stacks.
