

Alessio Carrà

Senior Product Manager | AI, Platform & Risk Operations

bralca88@gmail.com · Based in Germany · EU work authorization · English highly proficient

Senior Product Manager with 12+ years turning complex platforms, data APIs, and operational workflows into products people can understand and adopt. I have built a product from 0 to \$10M ARR in 9 months, doubled revenue at two companies, and led product, engineering, design, and growth teams. Most recently I have been building hands-on with Codex, agent workflows, evidence-grounded AI, evaluation systems, and human-in-the-loop automation.

FEATURED BUILD FOR REMOTE

Live product proposal: bralca.github.io/remote-risk-check

Country-Aware AI Risk Operations

A working multi-country EOR decision center built with Codex. Five hires across four countries demonstrate deterministic policy, cost-aware AI routing, evidence-grounded exceptions, and bounded autonomous case operations.

- Country policy clears standard hires and turns known evidence gaps into precise customer actions without model spend.
- Lightweight and advanced models are routed by task ambiguity and exposure; invalid AI output fails safely to a specialist.
- The agent handles routine evidence and communication, while reserves and other consequential actions remain human-owned.

KEY OUTCOMES

\$10M ARR from a product built 0 to 1 in 9 months	2x revenue doubled at two companies	12+ years building and scaling products	30+ cross-functional people led
---	---	---	---

EXPERIENCE

Senior Product Manager, Platform & Growth2022 - 2025

Moralis

Scope expanded from developer platform and data APIs to customer product, monetisation, growth, and leadership across several cross-functional teams.

- Owned developer-facing data APIs and platform services used to build wallets, applications, and analytics products across onchain ecosystems.
- Led requirements and tradeoffs from high-volume event ingestion and data processing through Wallet, Token, Transfer, pricing, and TradingView-compatible API surfaces.
- Delivered full Solana support from fragmented source data to reliable APIs and customer experiences, with data-quality and operational feedback loops.
- Built a customer-facing product on top of the platform and scaled it from 0 to \$10M ARR in 9 months, growing the operating model from one small squad to several product teams plus dedicated marketing.

Growth Product Manager2021

Celsius Network

- Helped scale a financial product to \$1B+ in assets under management through acquisition, activation, retention, lifecycle work, and measurable referral loops.

Growth Lead2019 - 2021

Pipe

- Set growth strategy and the tracking model for a B2B SaaS product, then doubled ARR within a year through funnel, lifecycle, conversion, and acquisition improvements.

Founding Member, Growth Product2017 - 2019

Studyportals

- Built a new product in a two-person founding team, scaled the team to 12, and owned the experiment pipeline and resource allocation across discovery, delivery, and growth.

Product Manager2015 - 2016

Alidays

- Shipped a website and mobile app that added EUR10M in revenue over two years after the company awarded my master's thesis.

SKILLS

AI Product Systems	Evidence-grounded AI Agent workflows Human-in-the-loop design Evals Model routing Observability Context management MCP Codex
Risk & Operations	Decision automation Policy tradeoffs False positives Auditability Operational tooling Exception workflows
Platform, Data & APIs	API lifecycle Developer experience Data products Data pipelines Data quality Webhooks Analytics
Product & Growth	Product vision Customer discovery Roadmaps Activation Retention Monetisation Experimentation
Leadership	Cross-functional leadership Remote-first teams R&D partnership Commercial alignment Product operations

EDUCATION & DEVELOPMENT

B.Sc. Industrial Engineering & M.Sc. Information Engineering2007 - 2013

Politecnico di Milano

Systems, operations, and technical product foundations. My master's thesis later became a shipped product and my first PM role.

Agentic coding and AI product systems2024 - 2026

Self-directed

Hands-on work with coding agents, model routing, evaluation loops, context management, and modern AI development stacks.
